

JAYDEEP PATIL

+91 9307671306 | patiljaydeep688@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Pune, Maharashtra

Full-stack software engineer with 2+ years of production experience shipping features used by 20,000+ monthly users. M.S. Computer Science, Arizona State University (GPA 3.80). Track record across the full stack — React/TypeScript, Node.js, Java Spring Boot, PostgreSQL, AWS — with proven impact: ~20% faster API response times, 50% page view growth, 100K+ record ETL pipelines, and ~25% LLM inference latency reduction. Experienced with production AI/LLM systems, CI/CD automation, and cloud-native deployment. Builds things end-to-end and owns them.

EDUCATION

M.S. Computer Science | [Arizona State University](#) | GPA: 3.80 / 4.00 Aug 2023 – May 2025

► 1st Place, 24-Hour Hackathon (2X) | Arizona State University

B.E. Electronics & Computer Science | [Mumbai University](#) | GPA: 9.28 / 10.00 Aug 2019 – May 2023

EXPERIENCE

SKYFARER ACADEMY | Full Stack Software Engineer | San Diego, CA Apr 2025 – Present

- **Grew organic page views 50% and pushed flight-training keywords from page 4+ to top 10 on Google** by re-architecting Core Web Vitals and structured data across the platform — directly expanded top-of-funnel traffic for the business.
- **Lifted booking conversion rate enough to be featured in the company newsletter**, by shipping Apple ID login, response-rate visibility, and personalized checkout flows to 30,000+ monthly visitors.
- **Cut API response times ~20% under concurrent load** while owning 6+ production features end-to-end — designing REST APIs, OAuth 2.0 integrations, and async AWS services from spec to deploy.
- **Built and shipped a shipping/logistics integration from scratch** (label generation, carrier rate comparison, seller insurance, real-time tracking) for the Pilot-to-Pilot Gear marketplace, collapsing a fragmented buy/sell/ship flow into one seamless experience.
- **Shipped a reusable React/TypeScript component SDK now used company-wide**, mentoring junior engineers on TypeScript standards and driving adoption across every team's workflow.

MATROID | Software Developer (Contract work) May 2024 – Jan 2025

- Designed and launched a React SPA serving **500+ concurrent users** — real-time seat availability, dynamic registration flows, and role-gated dashboards; **delivered with zero downtime on event day, supporting 3,000+ student registrations in a single session.**
- **Optimized MySQL queries cutting response time ~25%** via execution plan profiling and schema indexing; built backend services with **Java Spring Boot** and owned end-to-end CI/CD across a 5-person team.
- **Engineered 8+ Java Spring Boot REST API modules** (enrollment, progress tracking, content delivery) with real-time data sync.
- Adopted GitHub Copilot during early availability to accelerate **Java Spring Boot development — using AI-assisted code completion** for boilerplate API modules and test case generation, cutting initial implementation time on repetitive CRUD endpoints.

SKILLS

Languages: Python | TypeScript | JavaScript (ES6+) | SQL | Bash | C++ | Java

Frontend: React | Next.js | Tailwind CSS | Zustand | Redux Toolkit | Chart.js | CSS | Angular

Backend & APIs: Node.js | Express.js | FastAPI | Flask | REST APIs | OAuth 2.0 | JWT | GraphQL

Databases: PostgreSQL | MySQL | MongoDB | Redis | Query Optimization | Schema Design

DevOps & Cloud: AWS (EC2, S3) | Docker | Kubernetes | Github Actions | CI/CD | Git | Azure

AI & ML: PyTorch | LLM Integration | Generative AI | Prompt Engineering | Claude Code | GitHub Copilot | Scikit-learn | Pandas

PROJECTS

LLM INFERENCE PIPELINE — GPU-Accelerated Serving | *Python • PyTorch • CUDA • Flask • REST APIs* Jan – Apr 2025

- Engineered production GPU-accelerated LLM serving pipeline (PyTorch) with batching, FP16 mixed-precision, and memory-efficient tensor ops — **cut inference latency 25%**; exposed via Flask REST API with prompt engineering hooks, observability instrumentation, and structured error contracts for downstream AI-native workflows.

SHOPFLOW — Full Stack E-Commerce Platform | *React • TypeScript • Node.js • PostgreSQL • AWS • JWT* Aug – Nov 2024

- Architected full-stack e-commerce storefront (React, PostgreSQL) — Stripe checkout, JWT auth, RBAC, optimized indexed joins with connection pooling supporting **500+ concurrent users**; component library across 10+ views, Cypress E2E coverage, **deployed on AWS.**

TRAILYTICS — ML-powered personality analytics platform | *Python • BERT • Flask • React • JWT* Aug – Nov 2024

- Fine-tuned a BERT transformer for Big Five (OCEAN) personality prediction from a **1M+ data-point pipeline** — beating Logistic Regression, Random Forest, SVR, and CNN baselines by **~25% accuracy** — and shipped a React dashboard (radar/line/doughnut visualizations, one-click PDF export) validated across 250 seeded user profiles spanning 6 personality archetypes.

CERTIFICATIONS & ACTIVITIES

- **Student Ambassador | Adobe** — Led **hands-on workshops for 100+ students** on Adobe Creative Cloud tools, focusing on real-world design workflows and productivity; increased tool adoption and student engagement across campus
- **Technical Lead | Team Cyclops (ASU)** — Built and shipped **3+ production web features** using React and Node.js, including authenticated dashboards and responsive course flows, improving onboarding experience and usability.
- **Frontend Developer (React), Problem Solving (Intermediate) & Software Engineer** | **HackerRank**
